Initiator:	Finland	Target year:	2027
MDC:		Owner / responsible:	
Target Grouper:	FIN		

Description

This is an error correction which only concerns Finland.

We wish to make the following error corrections (preferably already) for FIN 2027 version:

1. Remapping of some FIN proc codes, creating a new plus code and adding some new features to that code

Concerns the following proc codes:

- NET60 *Lantionpohjan rekonstruktio, muodostaminen*
- NET62 *Lantionpohjan korjaus vierasmateriaalilla*
- NET64 *Lantionpohjan korjaus kielekkeellä*
- NET66 *Lantionpohjan korjaus vierasmateriaalilla ja kielekkeellä*

Currently all these codes are mapped to a plus code NESJ90 *Plastic reconstruction of lumbal base*, which has been given OR 0 property.

In our opinion, the plus code should begin with NEST and the Finnish word *Lantionpohja* means *Pelvic floor* (not Lumbal base). Also, since it's a question of a surgical procedure, OR 0 is not sufficient.

Our suggestion is to create a new plus code to which all four nat codes will be mapped:

NEST90 *Plastic reconstruction of pelvic floor*

We want to give the new code the following features:

vartype	varval	varval_text_comb
OR	1	1
PROCPR	06S10	Other digestive system OR procedure
PROCPR	08S20	Other musculoskeletal system or connective tissue OR procedure
PROCPR	11S15	Other kidney or urinary tract OR procedure
PROCPR	13S21	Excision or reconstructive operation on female reproductive organs
PROCPR	14S90	Significant operation for obstetrical patient
PROCPR	17S01	Major OR procedure in myeloproliferative diseases and disorders
PROCPR	21S09	Other OR procedure for injuries
PROCPR	21S10	OR procedure for trauma

2. Changing (unifying) the features of some MRI proc codes

Concerns the following proc codes:

- AB6CG Hartiapunoksen laaja magneettitutkimus (ACDG00 Brachial plexus MRI examination)
- JG1BG Peräsuolen magneettitutkimus (JGDG00 Rectum MRI)
- JG1CG Peräsuolen laaja magneettitutkimus (JGDG00 Rectum MRI)
- JG1DG Peräsuolen erittäin laaja magneettitutkimus (JGDG00 Rectum MRI)

We wish to:

- Remove PROCPR 90D91 Dose design for radiotherapy of malignancy From codes ACDG00 and JGDG00
- Add to code ACDG00 the following PROCPRs:
 - 01D02 Demanding diagnostic procedure of head, neck and central nervous system in MDC 01
 - 08D02 Demanding diagnostic procedure of head, neck and central nervous system in MDC 08
 - 21D02 Demanding diagnostic procedure of head, neck and central nervous system for trauma
 - 90D02 Demanding diagnostic procedure of head, neck and central nervous system for malignancy
- Change the OR feature of the code ACDG00 from 0 to 2 (as is the case with all the other MRI codes)
- Add PROCPR 06D32 Demanding diagnostic procedure of abdominal, retroperitoneal and pelvic organs in MDC 06 to code JGDG00

3. Removing the age limit for DRG 3400 *Kivesleikkaus, ei pahanlaatuista sairautta, lyhyt hoito* (Testes procedures, short therapy, rule id 110D091100) as short therapy groups are not usually divided by age.

History

#5494 - 2026-08-21 13:59 - Lotta Sokka

- Description updated

Error correction to the previous error correction request:

The MRI proc code that we want to give OR 2 property is JGDG00 *Rectum MRI* (not ACDG00, which already has OR 2).

Note that JGDG00 is also in use in Norway.

#5495 - 2026-08-24 10:17 - Lotta Sokka

Requested changes have now been made to MBS and NDMS.

As plus code JGDG00 *Rectum MRI* is also in use in Norway, we keep this case open until Autumn EG meeting for Norway to consider.

#5528 - 2026-09-07 13:32 - Lotta Sokka

2026-09-02 Expert Group

These changes have been done in FIN version. The case will remain active for Norway to comment.
