Target Grouper:	FIN		

Description

Related to ticket #853 which concerns the maintenance, content and features of ATC codes, we also had a look at the features of procedure codes which are used for coding the medication.

Following features are used in Finnish version to describe the use of medication:

attachment:"Image20230127093555_1.png"

The procedure codes are mainly used for coding the cytostatic therapy, some are used to code complex medication and other medication.

As a result, we suggest a few changes in Finnish version (see attached TC for details).

No economical analysis was conducted. This case is about clinical description of the features.

History

#4350 - 2023-02-23 13:11 - Anonymous

- Description updated

Veronika Stemme, Sweden

As we understand it this case only concerns Finland.

#4351 - 2023-02-23 13:20 - Kristiina Kahur

Nordic Casemix Centre/Kristiina Kahur 23-2-2023

Yes, following features under question are used only in FIN version.

90T01 Cytostatic drug
99S61 Demanding hormone therapy
99S80 Standard cytostatic therapy
99T00 Complex medication, unspecified
99X20 Medication delivered for home use.

However, the change concerns two codes which are also used in ICE version. The codes are as follows:

WFO100 Prophylactic cytostatic therapy
WFO300 Prophylactic therapy of malignancy with biomodifiers

If Iceland wants this change, PROCPR 90T01 Cytostatic drug should be added also to ICE version.

#4365 - 2023-03-03 11:32 - Birna Björg Másdóttir

Yes, Iceland would like this change

#4400 - 2023-03-15 18:26 - Kristiina Kahur

- Status changed from Active to Accepted

2023-03-09 Expert Group

This change concerns only FIN version. Changes in NDMS have been done according to suggestion. No changes in ICE version because the

procedure codes' features concerning this case are not used in ICE version.

Case is closed.
