Based on the feedback received via email some changes were made in SWE 2024PL0 version.

Please find attached SWE 2024PL0a version files for testing and comparison.

This is also a reminder that ord value is changing from version to version and cannot be used as a reference. Row ID value remains the same when the rules are reordered and therefore it should be used as a reference.

That said, please check is rows with ID 106D120131 (DRG 707P/F68O) and 400D712006 (372C/P05C) are placed correctly.

Please let us know if additional corrections are needed in PL version.

Additional corrections were made in SWE2024PR0 version according to the feedback sent via email (on Nov 1). As for for addeng variables with 'G' in the middle to compl_excl table, we need to investigate if this creates a need to reprogram the NDMS. We'll get back to this later.

Attached are the SWE2024PR0b tables and the file with correction ('TC_C1008_2023-10-31 - NDMS_NCC').

Please check once again and let us know, if any additional changes are needed before delivering SWE2024PR1 tables.
